

ABSTRACT OF DISCLOSURE

A first terminal block 3 having first terminals 2 to be in contact with terminals of a plug is incorporated in a housing

5 1. The first terminals 2 are exposed to an internal space portion 1e of the housing 1, while the rear ends of the first terminals 2 project at the rear of the block 3. A second terminal block 5 has second terminals 4 to be connected to a motherboard the modular jack should be attached to. Electronic parts 7a and 10 7b are mounted on an internal board 6. The internal board 6 includes through-hole-like terminals 6a and 6b or notch-like terminals to which the first and second terminals 2 and 4 should be soldered. Winding terminals 8 of winding parts are inserted and soldered to through holes 6c and 6d of the internal board 15 6.
